

# LEONARD DUMITRU

PRODUCT MANAGER, STRATEGIC CLIENTS · GOVERNMENT, DEFENCE AND INTELLIGENCE TECHNOLOGY

LOCATION Bucharest, Romania

STATUS Romanian and EU citizen · no sponsorship required

AVAILABILITY Remote EU / EMEA · on-site or hybrid in Europe by agreement

LANGUAGES Romanian native · English C2 (IELTS) · Spanish working knowledge

CONTACT +40 774 008 831 · wh-systems@proton.me · linkedin.com/in/wh-systems

CREDENTIALS GIAC OSINT 2024 · CEH v12 2023 · AWS CCP 2025 · Certified DPO

PROFILE  
2026 · EU

## 01 SUMMARY

I lead product and capture for government, defence and intelligence technology at a UAV and mission-systems group in Romania: I own the government deal end to end and the solution architecture behind it.

I have the background this sector expects: OSINT and telecom-intelligence support delivered to government agencies (subscriber and device attribution, RF and frequency monitoring, cell-site analysis, signalling exposure); GIAC OSINT and CEH v12 certified.

Technical depth: I architect counter-drone (C-UAS) detection and engagement systems, UAV ISR payloads and processing chains, digital-twin and command-and-control (C2) integration, and I built the internal AI platform we run on, with LLM agents in production and local open-weight models for air-gapped environments.

Before that, ten years of full-cycle commercial ownership in regulated payments, telecom and AdTech, including a \$400k+ monthly recurring revenue book I built and ran end to end.

## 02 KEY STRENGTHS

### GOVERNMENT AND INTELLIGENCE BACKGROUND

I take deals with ministries, security-sector bodies and critical-infrastructure operators from first contact to framework agreement or contract;

I have delivered OSINT and telecom-intelligence engagements directly to government agencies;

I ran fraud, AML and KYB / KYC review in a licensed payment institution.

### DEFENCE-TECHNOLOGY DEPTH

C-UAS sensor fusion (RF, radar, EO/IR), classification and tracking, graduated response by legal authority;

UAV platforms and payloads;

C2 and processing chains;

technology-readiness and field-test protocols;

I validate partner claims against measurement data before evaluators see them.

### I BUILD THE SYSTEMS I SELL

PostgreSQL operating platform with LLM agents (MCP, tool calling, retrieval, evals) in daily production;

local models for air-gapped use;

Python, FastAPI, REST APIs, Microsoft Graph;

AWS certified.

## 03 PROFESSIONAL EXPERIENCE

### Product Manager, Strategic Clients (Product & Capture Lead)

01/2026 - Present

Skyline Drones / La Orizont Group · Bucharest / remote

UAV, sensing and mission-systems group serving government, defence and critical-infrastructure customers in Romania.

- Own government and defence accounts end to end, from first contact to framework agreement or contract, working the national procurement platform directly (SEAP / e-licitatie, tenders, market consultations, framework agreements, CNSC appeals, EU-funded programmes).
- Opened a framework-agreement route with a government enforcement agency.  
Took the account from first contact to its head of IT and director of procurement, and redefined the requirement from equipment supply to operational competence and court-defensible evidence.
- Architect counter-drone (C-UAS) detection and engagement systems for defence and internal-security users: RF, radar and electro-optical / infrared sensor fusion, classification and tracking, graduated non-kinetic to kinetic response by legal authority, sensor-to-C2 processing chain, digital-twin architecture of the protected site.
- Built six institution-specific C-UAS and surveillance solutions on one modular capability spine, priced and packaged per customer.  
Removed the kinetic effector from civil-authority packages in favour of a graduated non-kinetic response.
- Run UAV ISR operations: airframe and payload configuration (multirotor, VTOL, fixed-wing; EO/IR, LiDAR, photogrammetry, SAR radar, multispectral, RF detection and Remote ID), live feed capture, data processing and interpretation into operator decision products, field-test and technology-readiness (TRL) protocols.
- Replaced spreadsheet operations and multiple paid SaaS tools with a single PostgreSQL operating platform I designed and built: account intelligence on 103,000+ companies, procurement-signal scoring, channel and partner development, bid generation, mailbox automation, access control.  
Runs LLM agents in daily production via MCP and tool calling; deploys local open-weight models for air-gapped environments.
- Specify and oversee the software layer of delivered solutions: sensor and UAV feed ingestion, processing pipelines, detection and alerting logic, operator interfaces, integration with institutional systems.  
AI components run under source validation and human approval for any engagement or irreversible action.  
Also: registered the company into military and multinational defence experimentation programmes (TRL sheets per system, equipment categories, frequency requests, test protocols, NDAs);  
validate partner technical claims against measurement data before they reach military evaluators.

### Platform Product Owner, Post-Merger Integration

04/2025 - 12/2025

AdStart Media · remote

Performance-marketing group formed by merging three companies; \$350k+ monthly recurring revenue, 100,000+ tracked conversions.

- Owned the product side of merging three companies into one platform and built the business-intelligence layer from scratch, validating every output in SQL against raw data.
- Reverse-engineered APIs, service dependencies and ingestion-to-reporting pipelines across the three environments; produced the target architecture and implementation-ready product contracts; led cloud and data migration requirements.

- Protected revenue through the merger: redesigned KPI and attribution logic for partner payouts, client billing and margin; defined alerting for revenue drops and partial failures.

Founder / Product Owner

12/2022 – 04/2025

WebHunt.io · Bucharest / remote (in parallel with the Relario mandate)

B2B intelligence and go-to-market automation products; intelligence support for government agencies.

- Delivered OSINT and telecom-intelligence support engagements to government agencies: subscriber and device attribution (IMEI, IMSI, MSISDN), RF and frequency monitoring, cell-site and coverage analysis, signalling exposure assessment. Requirements, sourcing methodology and delivery agreed directly with agency stakeholders.
- Designed and built enrichment and ingestion pipelines, entity resolution, ICP scoring, segmentation and workflow orchestration; integrated third-party APIs and webhooks under schema mismatches, rate limits and partial failures.
- Implemented LLM-based research, classification, retrieval and decision support with controlled source inputs and deterministic workflow rules; embedded GDPR, suppression and data-quality controls.
- Owned pricing, packaging and commercial implementation; sold and delivered to SaaS, cybersecurity, telecom and technology clients.

COO, Telecom Advertising Products

01/2023 – 09/2024

Relario Voice AG · Bucharest / remote

Swiss telecom company monetising voice traffic through advertising and authentication products.

- Owned the commercial and operational product layer between carriers, partners and billing; defined the billable product rules and partner terms behind telecom-advertising revenue.
- Worked from raw telecom data (call-detail records, completion rates, call duration, route performance) to define product and billing rules; diagnosed routing and partner-performance drops from source data.
- Identified fraud patterns and reporting discrepancies by validating partner outputs against raw telecom records.

Independent consulting and WebHunt.io pre-launch development

01/2022 – 11/2022

Self-employed · Bucharest

- Built the data pipelines, scoring model and commercial offer that became WebHunt.io, launched 12/2022.

Product Owner, SaaS Platform

03/2021 – 12/2021

Oriel.io · remote

- Product owner in a five-person team building an on-page machine-learning personalisation app for Shopify merchants; defined multi-tenant, event-driven behaviour across ingestion, segmentation, triggers, campaign orchestration and reporting; tested workflows end to end.

Senior Business Development Manager

09/2019 – 02/2021

Twispay / Capital Financial Services · Bucharest

Licensed EU payment institution; high-risk merchant segment.

- Acquired and onboarded 20+ major EU merchants end to end: qualification, commercial terms, negotiation, technical integration, go-live, account management.
- Ran KYB / KYC due diligence and fraud and AML review with the compliance teams (PCI DSS, AML, GDPR); worked directly with payment APIs, webhooks, callbacks and 3-D Secure alongside merchant engineering teams; blocked or re-scoped deals where technical or regulatory risk outweighed commercial value.

Affiliate Growth Manager, AdTech / Performance Marketing

07/2012 – 12/2018

BitterStrawberry AG · St. Gallen, Switzerland

High-volume mobile AdTech network monetising subscriptions, paywalls, apps and lead funnels.

- Originated and owned a \$400k+ monthly recurring revenue partner book end to end over six years: recruitment, negotiation, onboarding, account management; represented the platform at international industry events.
- Owned tracking and attribution (redirects, postbacks, sub-IDs, SSP / DSP targeting, payouts, caps); first-hand knowledge of adversarial traffic and attribution fraud, later applied to merchant risk and OSINT work.

04 SKILLS

INTELLIGENCE AND OSINT

OSINT tradecraft (GIAC GOSI) · subscriber and device attribution (IMEI, IMSI, MSISDN) · RF and frequency monitoring · cell-site and coverage analysis · signalling exposure · source validation and provenance · adversarial-traffic and fraud analysis (CEH v12)

DEFENCE TECHNOLOGY

C-UAS detection and engagement (RF, radar, EO/IR) · classification and tracking · graduated response models · UAV platforms (multirotor, VTOL, fixed-wing) · EO/IR, LiDAR, photogrammetry, SAR, multispectral, Remote ID · C2 and processing chains · digital twins · TRL and field-test protocols

AI AND SOFTWARE

Python · FastAPI · SQL / PostgreSQL · REST APIs and webhooks · Microsoft Graph · ETL, entity resolution, enrichment and scoring · LLM agents (MCP, tool calling) · retrieval (RAG) · structured outputs · evals · local open-weight models · AWS · Vercel · Linux · Git

CAPTURE AND PROCUREMENT

Requirement definition · technical positioning · proposals and tenders · negotiation · partner coordination · SEAP / e-licitatie · framework agreements · CNSC appeals · EU-funded programmes (POIM, PNRR, Modernisation Fund)

RISK AND COMPLIANCE

KYB / KYC · AML and fraud review · 3-D Secure · PCI DSS context · GDPR and privacy by design · Certified Data Protection Officer

05 CERTIFICATIONS AND EDUCATION

|                                                                               |
|-------------------------------------------------------------------------------|
| GIAC Open Source Intelligence (GOSI) · 2024                                   |
| Certified Ethical Hacker v12, EC-Council · 2023                               |
| AWS Certified Cloud Practitioner · 2025                                       |
| Certified Data Protection Officer · Ministry of Labour and Education, Romania |

BSc Economics and Management · Academia de Studii Economice, Bucharest, 2019 to 2022, completed alongside full-time work
